Experience

Thirty Signals

Apr 2026 – Present

SDE 1 *Gurugram, Haryana*

- **Engineered a multi-tenant isolation layer** using per-user Firecracker microVMs with dedicated tap-network subnets, driving an orchestrator that manages VM boot, idle-stop, and snapshot lifecycle across concurrent slots on shared host capacity.
- **Designed a zero-trust credential architecture** — a LiteLLM proxy issuing ephemeral, budget-capped virtual keys per session and a skill-scoped credentials broker, ensuring no long-lived secret ever resides inside a VM.
- **Built an end-to-end DR pipeline** — 15-min snapshot sync to Azure Blob with dual-snapshot rotation and a documented recovery runbook achieving ~20 min RTO, backed by tag-gated CI/CD with automated health-check retries.

Thirty Signals

Dec 2025 – Apr 2026

SDE Intern *Gurugram, Haryana*

- **Engineered and deployed production-grade agentic AI systems** using LangChain, LangGraph, and LangFuse — implementing multi-agent orchestration, stateful workflows, tool-calling, and RAG pipelines for enterprise client use cases.
- **Architected and built GoTixi** (gotixi.com) — an AI-powered travel planning platform serving **2,000+ daily active users**, leveraging LLM-driven requirement analysis, itinerary generation, async email delivery, and scalable backend services to automate personalized trip planning.
- **Implemented end-to-end LLM observability and evaluation infrastructure** using LangFuse — distributed tracing, prompt/version tracking, latency monitoring, cost analytics, and automated eval pipelines, enabling data-driven optimization of agent accuracy and response quality.

Itio Innovex Pvt Ltd

Sept 2025 – Nov 2025

Node.js Developer Intern *Ghaziabad, India*

- **Built a centralized Email Management Package** integrating 7+ providers (SMTP, Zoho, Gmail, etc.) with provider abstraction, template management, dynamic placeholders, retry logic, and TLS compliance.
- **Implemented logging, monitoring, and unit testing** using Winston and Jest — improving observability and code reliability across services.
- **Built a P2P Crypto Trading Platform** (React, Node.js, MongoDB) with trade lifecycle management, escrow logic, wallet integration, and real-time chat via Socket.io.

Education

Maharaja Surajmal Institute of Technology

2022–2026

B.Tech in Electronics and Communication Engineering (CGPA: 8.51/10)

New Delhi, India

Modern School

2018–2021

CBSE Class XII: 82.6% Class X: 90.5%

Ghaziabad, India

Projects

JeevanCare — Healthcare Platform (React.js, Node.js, MongoDB)

 GitHub

- Architected a full-stack telemedicine platform with appointment scheduling, secure payments, and live video consultations for 100% remote patient-doctor interactions.
- Engineered a prescription management system with compliant data validation, automating 40% of manual prescription workflows.

PII Detection and Protection System — *HackInvoverse Winner*

 GitHub

- Built a PII detection system masking sensitive data with 95% accuracy; integrated IPFS for immutable, tamper-proof audit trails and 2FA via NodeMailer.

Technical Skills

Backend: Node.js, Express.js, REST APIs, Socket.io, MongoDB, PostgreSQL

Infra / DevOps: Docker, nginx, AWS CI/CD (GitHub Actions)

Frontend: React.js, Next.js

Languages: C++, JavaScript, TypeScript, SQL

Dev Tools: Git, GitHub, Postman

Achievements

HackInvoverse — 1st Runner-up

Mar 2025

Hansraj College, University of Delhi

- Secured 2nd place among 900+ teams by building a PII Detection and Protection System.

HackWithMAIT 6.0 — Finalist

Mar 2025

Maharaja Agrasen Institute of Technology

- Ranked in the Top 10 out of 3,000+ teams in a national-level hackathon.
